Chapter 1

Specifikáció

1.1 A Feladat

A feladat egy olyan program elkészítése, amely különböző hanghullámokat képes generálni, valós időben lejátszani és elmenteni. A felhasználó beállíthatja a hanghullám néhány jellemzőjét, mint például a hangerejét, a generáló függvényt, a lecsengés függvényét, illetve a lecsengés időtartamát.

1.2 Use-case

A fontosabb use-case-eket a következő táblázat foglalja össze:

Név	Leírás	Actor
Hang leütés	A felhasználó leüt egy billentyűt	Felhasználó
Generátor váltása	A felhasználó lecseréli a generátor függvényt	Felhasználó
Lecsengés váltása	A felhasználó lecseréli a lecsengésért felelős	Felhasználó
	függvényt	
Lecsengés időzítése	A felhasználó beír egy lecsengési időt	Felhasnáló
Felvétel indítása, leállítása	A felhasználó egy gombbal elindítja vagy	Felhasználó
	leállítja a felvételt, majd elmenti egy fájlba	
Állapot mentés	A felhasználó elmenti a program beállításait egy	Felhasználó
	fájlba	

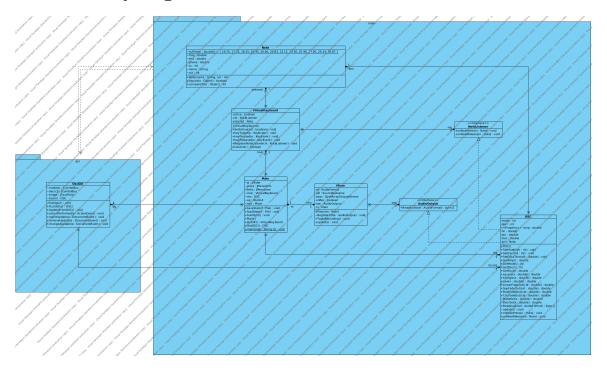

1.3 A megvalósítás alapötlete

A kezelőfelület SWING-el működik. A hangerőt egy JSlider-en, a generátor és lecsengés függvényeket JComboBox-on, a lecsengés időtartamát JTextField-en lehet beállítani. A felvétel gombbal indítható, az állapot mentése a menüsávból lehetséges. A hangok lejátszásáért és felvételéért a Java beépített audio könyvtára felel.
